

## FAQ: On the Portal the “Find location in Map” link does not work

**Question:** In the portal there is a link for “Find location in Map”. This link only brings up a blank square. There is no map shown. Why? Is there a way to get this to work?

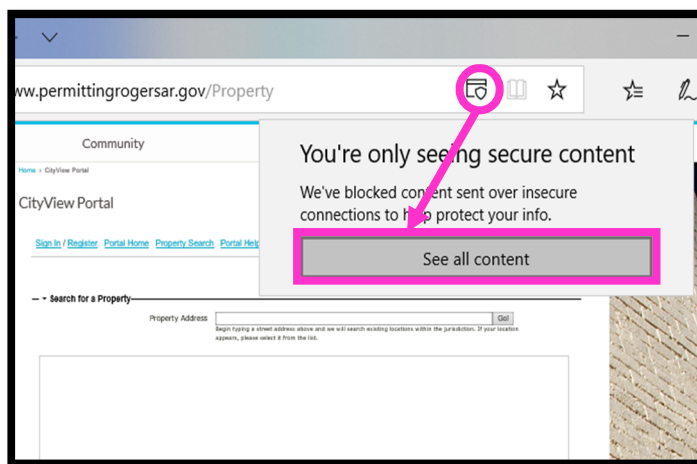

**Answer:** This is because the portal page is attempting to load content from a site that is not “https”. In CityView, this content derives from the Rogers GIS site (gis.rogersar.gov).

Google Chrome and Microsoft Edge will block this content by default. But you can allow loading of this by clicking the security icon in the browser address bar.

In Chrome click as shown below:

In Edge it will be shown as this:

Note that in Chrome after the insecure content is allowed it will indicate that the entire page is “Not secure”.
