

HOW TO PLACE YOUR CART AT THE CURB

In cooperation with the City of Rogers, Arkansas and you, its fine customer, Inland Service Corporation will be installing a fully automated garbage cart collection system. Every customer will receive a new, plastic roll away cart. These new carts will provide for a cleaner environment, better looking streets on collection day, and a much safer solid waste collection method. These carts have wheels for easy hauling and an attached lid that helps keep out insects and stray animals. On collection day, there will be no piles of garbage, just a row of carts at the curb. With an automated collection system, collection personnel no longer come in contact with the garbage because your new cart is mechanically lifted and dumped into the garbage truck.

In order to properly collect your solid waste we must have unobstructed access to it. To insure clean and proper pick up, please be sure your carts are not overflowing and the lids are closed when you place them out for pick up. Garbage Drivers will not pick up anything outside the cart. Automated refuse trucks are equipped with a mechanical arm that lifts and empties your specially designed refuse cart.

If you live on a street that has an alley behind it, **the street** is the curbside collection point. Do not place the container in the alley for collection. Do not place the container behind obstacles such as trees or retaining walls and do not chain, tie or otherwise secure the container to any object. Please see the picture below for the proper placement of the container.
